FALL 2008 PROMOTIONS!

All Promotional Prices Good from October 1st through December 31st 2008

Service Tip

GOLD LINE® ACW DISPLAY IS BLANK

If your Gold Line® ACW is still functional but the display is blank, set a volt meter for DC Voltage, unplug the number 6 connector out of the distribution board. This plug will have 4 black wires, 3 red wires and 1 yellow wire. Check the voltage across any one of the black wires to any one of the red wires, you should get 5VDC. If there is NO voltage there, plug the number 6 connector back in and go to the DC Power supply which is located on the left wall of the cabinet above the controller. There will be 2 harnesses plugged into the DC power supply, unplug the 3 pin connector. It should have a black, white and green wire. Set your volt meter to AC Voltage, go across the black and the white wire, you should have 120VAC.

If you do, then you have a bad DC power supply.

You can call Hamilton's parts department and order a new one, part #49-9304. If you do not have 120V, call our Technical Support Department. 1-800-837-5561 option #3 for Parts, option #5 for Tech Support.

CVC Christmas Rush

Believe it or not, the Christmas rush is on. Customer Value cards make great stocking stuffers. At this time it's about a 6 week lead time to receive orders. If you will need more cards by December you need to place your order now. Don't wait and miss out on a great marketing opportunity.

Fall Show Schedule

NACS, 10/05 -10/07/08,
Chicago, IL
MCA, 10/20-10/21/08, Chicago,
IL
NRCW, 10/27 -10/29/08,

**DTT's must be used in conjunction with the Data Access Network.*

Hamilton Code System 4 for Parking

Some time ago, we had a request from a parking equipment distributor to supply a system which would issue a single use code number to be entered into a keypad to allow a patron to exit a parking facility. The circumstances were that the distance from the code issuing station to the exit was considerable AND they needed multiple code issuing stations.

The [Hamilton Code System Four](#) (HCS4) fits the need perfectly. The

system allows multiple code issuing stations as well as multiple exits without the need to hard wire the remote code issuing consoles. Installation of a remote console is as simple as plugging into an outlet and setting the software parameters. The most important aspects of this system are the ability to issue multiple use as well as single use codes and there are no distance limitations for the remote consoles and "no wired connection" (other than to a power supply). Additional uses proposed for this system are for restricted access to facilities such as marinas, parks, campgrounds, storage and warehouse facilities or truck facilities - anywhere single or multiple use code access is desired. We have even proposed a way that a single code can be good to both enter and exit a facility one time.
